**We are excited to have you join us for our very first virtual Girls in Science and Engineering Day!**

The Intrepid Museum will be joined by several science-based organizations for Girls in Science and Engineering Day, an annual event that will expand your mind and spark curiosity about the physical world around you. Discover what cool projects your peers are working on and conduct your own science experiments using materials from around your home or living space. The event will kick off with a live conversation with molecular biologist and science communicator Raven Baxter, followed by various special sessions.

Watch the live stream on any of the Museum's channels

**RAVEN BAXTER**

#### FEATURED SPEAKER:

**Raven “the Science Maven” Baxter** is an internationally acclaimed science communicator and molecular biologist who works to progress the state of science culture by creating spaces that are inclusive, educational and real. Raven is the founder of Science Haven, which houses projects and initiatives such as *STEMbassy*, a web series that connects the public with science and technology professionals in a weekly live show. She combines her love of science and music to help empower both students and professionals in STEM and beyond.
